Sunnybank Station

Project: Sunnybank Railway Station Upgrade

Client: Queensland Rail

Price: 18.7 Million

Completed: January 2008

Doval Constructions, together with Queensland Rail, GHD and Abigroup, formed an alliance partnership to upgrade the track formation and stations between Salisbury and Kuraby, Brisbane.

Doval were responsible for the largest of these station upgrades at Sunnybank, together with the associated construction of a new carpark facility and the realignment and reconstruction of Stones road, Breton Street, Dixon Road and the level crossing linking these three access points.

The existing platforms were raised and new lift shafts with overhead footbridge accesses were installed. A new track formation was prepared prior to Queensland Rail laying a fourth track through the Station.

All works were successfully completed whilst maintaining commuter access within the live electrified rail environment.

Top: Heritage Building Renovation and new Footbridge Construction.

Bottom From Left: Platform raising and track formation preparation; New lift shaft and footbridge piled foundation construction, Completed realignment of Stones Road access
